CURO

The Frictionless Clinical Operating System.

The Invisible Digital Divide

Most healthcare software is built for two extremes. Independent, mobile physicians are left stranded in the middle.

Tier 1: Heavy ERPs

Massive, expensive systems built for hospital compliance and admin tracking, not speed.

CURO

Tier 2: Discovery Platforms

Aggregators built for marketing and discoverability, treating the clinic like a listing instead of a business.

02

The Reality of Private Practice

Because existing systems are bloated or ill-suited for daily operations, doctors use them just to get patients in the door.

Once inside, they revert to manual pen-and-paper, fragmented spreadsheets, and chaotic WhatsApp threads to actually run their clinic.

The Result

2 hours lost every day doing manual data entry.
Fragmented patient histories. Chasing patients for payments via screenshots.

— 03 / THE THRESHOLD

The 60-Second Rule

Independent doctors face a massive time crunch. Time is their ultimate currency.

If software takes more than 60 seconds to write a prescription or log a diagnosis, **doctors will abandon it.**

<60s

The Abandonment Metric

We built CURO to respect the doctor's time, transforming software from a chore back into a clinical utility.

The Multi-Clinic Context Switch

A doctor might be at Clinic A in the morning, and Clinic B in the evening.

They desperately need their patient data to follow them securely on a lightweight web app, without needing to sync with a specific clinic's local, legacy server.

— 05 / THE SOLUTION

Meet CURO

We stripped away the enterprise bloat. Instead of another rigid management database, CURO focuses entirely on high-velocity, essential workflows: rapid charting, seamless scheduling, and lightweight history tracking.

Command Center for the Clinic

Instant Payments

Link a bank account once. All patient payments go directly to the doctor without manual verification.

Flexible Slots

Set different fees for online video consults vs in-clinic visits. Video links are generated automatically.

Clear Scheduling

A simple, color-coded list of today's appointments. Scan the entire day without clicking anywhere.

Zero Memory Burden

A doctor should never waste time trying to remember a patient's history.

With CURO, the burden of memory is entirely removed. Before the patient even walks in, the doctor is handed an instant AI summary of past diagnoses and newly uploaded reports.

Context Before Consultation

"Patient presents with recurring fever. History of similar symptoms in Apr 2025. Previously prescribed Paracetamol."

The Zero-Type Consultation

- **Everything on One Screen:** No opening five different windows to add medicines, lab tests, and advice.
- **Fast Typing:** Auto-completes medicine names and makes it incredibly easy to quickly type out dosages.
- **One-Click Delivery:** Generate a professional PDF and send it straight to the patient's WhatsApp instantly.

No Apps to Download. Ever.

A Single Link

Doctors simply put their CURO link in their WhatsApp bio or Instagram profile (curo.me/dr-name).

Desk QR Codes

Patients in the waiting room just point their smartphone camera at a QR code to instantly join the digital queue.

Frictionless from Booking to Prescription

1. Zero Passwords

Patients simply type their phone number to enter. A secure OTP gets them back to the booking screen in seconds.

2. Upfront Payments

They lock in the slot by paying immediately through Razorpay/UPI. No chasing payments.

3. Secure Sharing

Patients get detailed prescriptions on a timeline. They can quickly download or share their records with other specialists.

The Value Proposition

Doctors forget patients.

→ CURO's AI remembers them instantly.

Chasing patients for payments.

→ Patients pay upfront to book a slot.

Clunky hospital software.

→ Write a prescription in under 60 seconds.

Patients hate downloading apps.

→ A single link opens directly in their browser.

A \$300M ARR Market

- **Fragmented Landscape:** Over 575K clinics in India and 5K+ in the UAE dominated by solo practitioners.
- **Dual Revenue Model:** Highly scalable SaaS subscriptions + a flat transaction fee on every routed payment.
- **Deep Lock-in:** Once a doctor's entire patient history and automated workflow is on CURO, they don't leave.

600K

Target Clinics

Across India & GCC markets ripe for vertical software disruption.

— 13 / THE FUTURE

Join CURO

The vertical SaaS playbook applied to fragmented healthcare is proven.
The addition of LLMs changes the UI paradigm from "data entry" to "data approval."

Let's build the financial and operational backbone for independent doctors.
